PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 1+ year of professional experience building production-grade MERN stack applications and scalable backend systems. Led backend development on a commercial product at Phebsoft, integrating American Standard data into the platform. Previously at Versori (UK), built automation solutions and integrated enterprise systems across REST, SOAP, and GraphQL APIs using TypeScript and Node.js. Strong focus on clean architecture, API design, and maintainable code.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Java, Python
Frontend	React.js, Next.js, Tailwind CSS, HTML5, CSS3, Responsive Design
Backend	Node.js, Express.js, Spring Boot, REST APIs, SOAP, GraphQL, WebSockets (Socket.io)
Auth & Security	JWT, OAuth2, Firebase Authentication, Machine-Bound Licensing, RBAC
Databases	MongoDB, PostgreSQL, MySQL, SQLite (better-sqlite3), Sequelize ORM, Hibernate
Cloud & Tools	AWS EC2, AWS Lambda, AWS S3, Docker, GitHub Actions, Git, Postman
Platforms	Salesforce, SugarCRM, Syspro, Infoplus, Trustpilot, ZigZag, Shoptline, SmartPricing
Desktop	Electron, Electron Builder

PROFESSIONAL EXPERIENCE

Full Stack Developer · [Phebsoft \(Pvt.\) Ltd, Islamabad](#)

Mar 2025 to Present

- ▶ **Led backend development on Phebsoft's core product, owning the Node.js/Express architecture, API layer, and MongoDB schema design.**
- ▶ Integrated American Standard data into the platform, building pipelines to ingest and normalize third-party product data.
- ▶ Designed and built RESTful APIs with proper error handling, input validation middleware, and structured logging for production observability.
- ▶ Developed dynamic, responsive frontend interfaces using React and Next.js, collaborating with design to deliver polished user-facing features.
- ▶ Led technical decisions for the product: setting coding standards and conducting code reviews to maintain codebase quality.

Solutions Engineer · [Versori, United Kingdom \(Remote\)](#)

Aug 2024 to Mar 2025

- ▶ **Developed automation solutions and integration workflows using TypeScript and Node.js for a UK-based integration platform.**
- ▶ Integrated diverse enterprise systems via REST, SOAP, and GraphQL APIs, handling authentication, data mapping, and error recovery end-to-end.
- ▶ Built Node.js scripts to automate data transformation, file-based workflows, and scheduled business processes.
- ▶ Worked with JWT and OAuth2 to securely connect third-party APIs and enterprise platforms including Salesforce, SugarCRM, Syspro, Infoplus, Trustpilot, ZigZag, Shoptline, and SmartPricing.
- ▶ Debugged and optimized existing integration pipelines, improving reliability and reducing failure rates across automated workflows.

- ▶ Documented integration contracts and workflow diagrams, reducing onboarding time and support overhead for the team.

KEY PROJECTS

Matchwise: AI-Powered Skill & Compatibility Analysis Platform [→ GitHub](#)

[Node.js](#) · [Express.js](#) · [MySQL](#) · [Sequelize](#) · [OpenAI API](#) · [Firebase Auth](#) · [REST APIs](#)

- ▶ **Developed and maintained the backend of an AI-powered career analysis platform, designing the full API layer with Node.js, Express.js, and MySQL.**
- ▶ Implemented AI-driven skill analysis workflows using OpenAI APIs with structured JSON response enforcement for deterministic output.
- ▶ Integrated O*NET occupational datasets for compatibility scoring, building complex data mapping and processing pipelines.
- ▶ Optimized MySQL queries and Sequelize ORM models to support real-time skill-gap analysis and reporting at scale.
- ▶ Implemented Firebase Authentication for secure user management and integrated it seamlessly with the backend API layer.

TradeSquare: Real-Time Dual Auction Marketplace [→ Backend](#) | [Frontend](#)

[MERN Stack](#) · [WebSockets](#) · [JWT](#) · [MongoDB](#) · [Role-Based Access Control](#)

- ▶ Built a full-stack marketplace with dual auction (buy/sell + bartering) supporting concurrent real-time bidding via WebSockets.
- ▶ Implemented role-based access control, secure JWT authentication, and session management for multi-user flows.
- ▶ Optimized MongoDB aggregation pipelines and indexing strategies for high-volume bidding operations under load.
- ▶ Designed the backend architecture from scratch, including data modeling, API structure, and real-time event handling.

Offline ERP Desktop Application [→ GitHub](#)

[Electron](#) · [React](#) · [Tailwind CSS](#) · [SQLite \(better-sqlite3\)](#) · [JWT Licensing](#)

- ▶ Engineered a fully offline ERP desktop system using Electron and better-sqlite3 with automated local backup and recovery.
- ▶ Secured the application with machine-bound JWT licensing to prevent unauthorized redistribution.
- ▶ Designed a modern, responsive UI with React and Tailwind CSS; optimized SQLite queries for datasets exceeding 100K rows.

EDUCATION

BS Computer Science · [Hazara University, Mansehra](#)

2021 to 2025

- ▶ Relevant coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Software Engineering, Computer Networks.
